

CASE STUDY

Oil Free Air from Oil Lubricated Compressors

The Challenge

At Napp Pharmaceuticals' Cambridge site, the compressed air plant was becoming unreliable and the compressed air quality sub-standard for the nature of their industry.

Maziak Compressor Services Ltd were contacted to technically advise, design and build a compressed air package to suit the needs of a world class pharmaceutical manufacturer.

Results

This system permanently monitors all aspects of air quality for continual validation. With this energy efficient installation, oil free air from oil lubricated compressors is continually validated.

Maziaks' Solution

The proposed variable speed drive lead/standby compressor plant met their energy efficiency requirements with a sophisticated air treatment package compliant with the pharmaceutical air quality to the standard of ISO8573.1 Class 2.2.1.
